With respect to claims 1, 5, 9, and 10, in addition to other elements in the respective claim, the prior art does not teach or suggest "a system and method for reading or writing from a dynamic memory circuit having plurality of word lines, each of word lines having a plurality of mutually separate word line sections, and via the bit lines, in the event of addressing with the specific address, in parallel, and activating only a portion of the word line sections in the event of addressing with the specific address, resulting in only a portion of the memory cells being addressed by the word line and being written to in parallel or read from in parallel".

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lee et al. (Pub. No.: US 2003/0086325 A1) discloses a DRAM having a partial refresh circuit and a row address selects a row of word lines and portions of the selected word lines are sequentially activated.

Naritake (Patent No.: US 6,208,563 B1) discloses a DRAM device which performs only burst read/write operation, in a write cycle or a read cycle performed every word line, a plurality bits of data are continuously read from or written to a memory cell array.

Crafts (Patent No.: 5,896,331) discloses the word line and bit line decoders respond to predetermined address signals supplied on the address bus to energize or activate those specific word line conductors and bit line conductors which correspond to the address signals.
